

# PRINTING CYLINDERS

## Pills & capsules

**siba** has many years' experience in the printing of pharmaceutical products and the dedicated advanced equipment to deliver the most accurate and best quality printing result.

We specialize in the manufacturing of steel printing rolls for the printing of pills, softgels and two-piece hard gelatin capsules in the pharmaceutical industry and for the printing of hard candies in the sweetmeat industry.

pills

candies

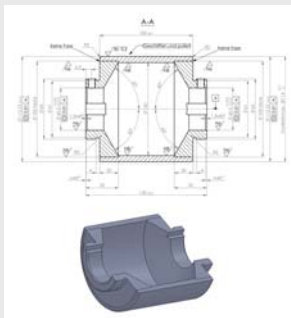

Laser engraved steel rolls for pharmaceutical applications

Offset transfer rolls for C10 and B4 machines

Independently of your printing machinery, siba is able to supply any kind of steel-based or alloy printing cylinder up to 500 mm table length.

Thanks to an accurate and systematic workflow ( artwork development - rasterizing - engraving - chrom-plating - polishing) each step of the manufacturing process is strictly controlled to achieve the best required quality.

The new laser techniques allow to adapt different kinds of geometric engraving forms, depending on the specificity of the products that have to be printed and the printing constraints of the machinery.

Adequate geometric engraving forms for the printing of pharmaceutical products

## Other applications

Our engraving techniques and the method of manufacturing our printing cylinders allow us to print not only on pharmaceutical goods but on many other kinds of printing subjects, like for the packaging industry, the wine and cosmetic environment, etc.

There is no limit, we will analyse any special need and strive to find the adequate technical solution to your special need.
